maya@example.com
Tel Aviv, IL
mayachen.dev

Product-minded engineer with 8 years building consumer and developer-facing software at startups (Series A - C). Comfortable owning a feature end-to-end - from user research and API design through deployment and post-launch metrics. Looking for a role where I can keep shipping product but also help shape the engineering culture as the team scales.

EDUCATION

2014 — 2018
Tel Aviv University
B.Sc. Computer Science
Magna cum laude. Thesis on CRDTs for collaborative editing.

SKILLS

- TypeScript / JS
- React / Next.js
- Node.js / tRPC
- PostgreSQL / SQL
- GraphQL
- System design
- AWS / Cloud infra
- Python

LANGUAGES

- English (Native)
- Hebrew (Native)
- Mandarin (Conversational)

CERTIFICATIONS

AWS Solutions Architect - Associate
Amazon Web Services
2023

AWARDS

Stellate Engineering Impact Award

WORK EXPERIENCE

Senior Product Engineer — [Lumen Health](#) · Tel Aviv (hybrid) 2023 — Present
Owned the booking flow end-to-end; helped scale the team from 6 to 14 engineers.

- Led the rewrite of the booking flow from a legacy Rails monolith to a **Next.js + tRPC** stack - cut booking-completion time by 38% and reduced support tickets by ~60%.
- Designed and shipped a real-time clinician-presence system using **Postgres LISTEN/NOTIFY** and SSE, replacing a brittle polling layer that was hitting RDS hard.
- Mentored two mid-level engineers through promotion; wrote the team's first code-review guide and ran weekly architecture reviews.
- Drove HIPAA-style data partitioning across services as the company expanded from one country to four.

TypeScript Next.js tRPC PostgreSQL Prisma Redis AWS Datadog

Full-stack Engineer — [Stellate](#) · Remote 2020 — 2023

- Built the customer dashboard from scratch (**React, GraphQL, Tailwind**) - became the primary surface for 800+ paying teams.
- Owned the **Stripe billing integration** including metered usage, proration, and a self-serve plan-switching flow that eliminated ~10 hrs/week of finance manual work.
- Wrote the company's first incident playbook after a 4-hour edge outage; ran post-mortems for the following year.
- Shipped public-facing GraphQL analytics, cited in two of the top three closed-won deals of FY22.

TypeScript React GraphQL Node.js Stripe Cloudflare Workers

Software Engineer — [Riverside.fm](#) · Tel Aviv 2018 — 2020

- Implemented **client-side local recording with progressive upload** - the core differentiating feature of the product - using WebRTC, MediaRecorder, and S3 multipart.
- Reduced average upload-completion latency from ~14 min to under 3 min by parallelizing chunk uploads and adding exponential-backoff retry.
- Co-designed the company's first observability stack on a self-hosted ELK + Prometheus setup.
